PROFESSIONAL SUMMARY

- My most recent project included developing a platform designed for 500,000+ users.
- I'm well versed in all things Linux, my experience as a system administrator has made me quite comfortable with the command line.
- I enjoy learning new technologies, each website or application requires a unique set of tools, and the developers building the site must adapt around the tools that are the most optimal.

EXPERIENCE

Full Stack Developer(AngularJS) | MyKlvr

March 2017 – Present

- Managed team of four to build out over 15 pages of front end of website.
- Created controllers, modules, components, and updated routes using AngularJS.
- Optimized workflow by compiling custom Materialize CSS sheet that reduced development time by 200 man hours over 3 months.
- Integrated 3rd party libraries to enable drag and drop functionality for user profiles.
- Integrated the backend to the front end by hooking up the inhouse RESTFUL API.

Freelance Full Stack Developer | Upwork

January 2016 - Present

- Performed pre-assessments to determine the client's needs. The goal of these assessments was to identify the user, and create a user model based on the assumptions.
- Designed websites & web applications from scratch, most of time this required using only HTML5, CSS, and Javascript.
- Identified performances issues and implemented solutions to solve them.
